

CCI Now Offers ESD Safe Tape

ESD Safe Tape a great option for RSCs, HSCs, and Front Lock Mailers

As the electronics industry becomes increasingly sensitive to electro-static discharge, it is important that you have all of your bases covered. In almost all shipping situations, tape must be used to secure different types of packaging. If you are in an ESD environment or surrounded with ESD sensitive electronics, it is crucial that you do not neglect something as simple as tape. Tape can be static generating, and thus cause harm to electronics without you knowing it.

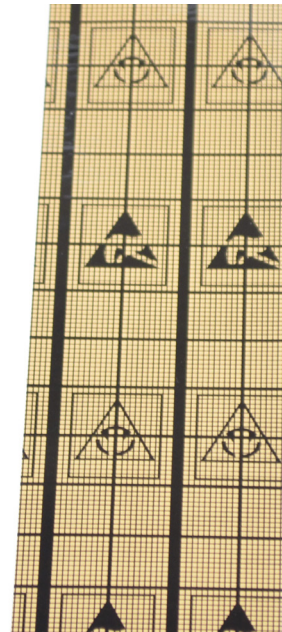

Our ESD tape will give you the peace of mind that your electronics are safe from ESD damage without any change in the performance of the tape. Our ESD safe tape is made up of three layers - two dissipating copolymer substrates on the outside and a conductive layer buried between them. This tape provides strong adhesion and meets or exceeds the requirements of ANSI ESD-S2020.

Facts at a Glance

- Non-charge generating
- Safe for ESD applications
- Available in sleeves of 6
- Strong adhesion
- Meets or exceeds ANSI-ESD-S20.20

CCI Stock Part Number	Dimensions	Sleeve Quantity
ESDT-2	2" Width / 118' Length	6

- This product is also available in 1/2", 3/4", and 1" widths - contact CCI for pricing and information
- Custom widths must be purchased in complete sleeves
- ESD Tape spec sheet available online at www.corstat.com
